We Claim:

1. A device, comprising:

- a) a implantable pacemaker element;
- b) a implantable defibrillator element connected to said pacemaker element; and
- c) a plurality of atrial and ventricular pacing leads connected to said pacemaker element, wherein said pacing leads are configured for simultaneous activation.
- 10 2. The device of Claim 1, further comprising a plurality of atrial and ventricular defibrillation leads connected to said defibrillator element.
 - 3. The device of Claim 1, further comprises a plurality of atrial and ventricular sensing leads connected to said pacemaker element.
- 4. The device of Claim 1, wherein said pacemaker element further comprises a storage memory connected to said sensing leads.
 - 5. The device of Claim 1, wherein said device is capable of detecting an earliest arriving electrical signal.
 - 6. A method, comprising:
 - a) providing:
 - i) a patient implanted with a device, comprising;
 - 1) a implantable pacemaker element; and
 - a plurality of atrial and ventricular pacing leads connected to said pacemaker element, wherein said pacing leads are

configured for simultaneous activation and coursing to the ventricles and atria; and

- ii) a plurality of sensing leads connected to said pacemaker coursing to the ventricles and atria;
- b) initiating one or more pacing bursts by said pacemaker element, wherein said ventricles and atria are simultaneously paced; and
- c) detecting an earliest arriving electrical signal following termination of said pacing bursts.
- 7. The method of Claim 6, wherein prior to step b) a cardiac arrythmia is detected in said patient.
 - 8. The method of Claim 6, wherein said earliest arriving electrical signal is from the ventricles.
 - 9. The method of Claim 6, wherein said earliest arriving electrical signal is from the atria.
- 15 10. The method of Claim 6, further comprising step d) defibrillating said ventricles under conditions such that normal sinus rhythm is restored.
 - 11. A method, comprising:
 - a) providing;
 - i) a patient;
 - ii) an electrocardiogram array;
 - iii) a plurality of intracardiac quadripole catheters, wherein said catheters are configured for simultaneous atrial and ventricular pacing; and
 - iv) a computer configured to receive electrical signals from said catheters;

5

- b) placing said array on the skin surface of said patient;
- c) inserting said catheters into said patient;
- d) simultaneously pacing said atria and ventricles; and
- e) detecting with said computer an earliest arriving electrical signal.
- The method of Claim 11, wherein said earliest arriving electrical signal is from the ventricles.
 - 13. The method of Claim 11, wherein said earliest arriving electrical signal is from the atria.
- 14. The method of Claim 11, wherein said earliest arriving electrical signal is from the junction between the atria and ventricles.
 - 15. The method of Claim 11, further comprising step f) diagnosing said patient as having ventricular tachycardia.
 - 16. The method of Claim 10, further comprising step f) diagnosing said patient as having supraventricular tachycardia.
- 15 17. The method of Claim 10, further comprising step f) diagnosing said patient as having atrioventricular nodal reentrant tachycardia.
 - 18. The method of Claim 10, wherein said computer is connected to a data readout device.
 - 19. A method to detect the origin of a cardia arrythmia, comprising:
 - a) providing;

20

- i) a patient exhibiting cardiac arrhythmia;
- ii) a system comprising a plurality of pacing leads and a plurality of sensing leads;

- b) simultaneously pacing the atria and ventricles of said patient; and
- c) sensing with said sensing leads said atrial and ventricular electrical activity after said pacing under conditions such that the earliest arriving electrical signal is detected.
- The method of Claim 19, wherein said earliest arriving electrical signal is from the ventricles.
 - 21. The method of Claim 19, wherein said earliest arriving electrical signal is from the atria.
- The method of Claim 19, wherein said earliest arriving electrical signal is from the junction between the atria and ventricles.
 - 23. The method of Claim 19, further comprising step d) diagnosing said patient as having ventricular tachycardia.
 - 24. The method of Claim 19, further comprising step d) diagnosing said patient as having supraventricular tachycardia.
- 15 25. The method of Claim 19, further comprising step d) diagnosing said patient as having atrioventricular nodal reentrant tachycardia.
 - 26. The method of Claim 19, wherein said computer is connected to a data readout device.
